Geology Museum Director Studies Glaciers in the Swiss Alps

Lauren Neitzke Adamo is working in Switzerland with a team of researchers to measure the topography of the exposed former beds of glaciers in the Alps to create computer models that can be used to predict future sea level rise. Check out her [blog](#) from the trip and tune in to a [livestream August 23](#) to learn more about her research. Adamo also plans to use her experience to develop programs at Rutgers Geology Museum when she returns.
